

MATIAS CALVAR

Frontend Engineer | React | TypeScript | Next.js | Fintech

Porto, Portugal | matiasncalvar@gmail.com | matiascalvar.com | linkedin.com/in/matiascalvar | github.com/matiascalvar

PROFESSIONAL SUMMARY

Frontend Engineer with 5+ years of experience building data-intensive financial applications with React, TypeScript and Next.js. Experienced in real-time market data, WebSockets, complex DataGrid systems, financial charting, trading and options workflows, and subscription platforms. Strong focus on frontend architecture, performance, reliability and product delivery in fintech environments.

PROFESSIONAL EXPERIENCE

Frontend Engineer | ORTEX Analytics - Fintech

Oct 2022 - Sep 2026 | Remote

- Built and maintained functionality across ORTEX's financial analytics and trading platform using React, TypeScript, Next.js and Material UI, spanning market data, portfolios, trading, charting, alerts, subscriptions and APIs.
- Standardised shared DataGrid infrastructure across dozens of financial-data modules, supporting API-driven columns, filtering, sorting, pagination, live updates, content obfuscation and large-dataset virtualisation.
- Developed real-time market-data integrations using WebSockets across stock pages, ticker tape, order books, portfolios, charts and trading modules; migrated key areas away from legacy socket implementations and reduced unnecessary subscriptions and re-renders.
- Built trading workflows covering buy/sell, bracket, OTO and OCO orders, live pricing, validation and broker integrations, with close attention to real-time state and financial correctness.
- Implemented options-trading capabilities including approval and entitlement flows, OCC contract resolution, buying power, position intent, open/close workflows, positions, order history and broker error mapping.
- Improved application performance and reliability by addressing memory leaks, redundant renders, WebSocket subscription issues and progressive chart lag; achieved a 30% faster load time for a core component.
- Developed financial visualisations with Highcharts, TradingView and MUI Charts, including live market data, portfolio charts, responsive interactions, performance improvements and export functionality.
- Delivered nested financial alerts with groups, rules, validation and logical operators; also contributed to Stripe payments, promotional codes, upgrade flows, API plans, free-user content gating, US Government Trades and AI-powered financial modules.

JavaScript Instructor / Teaching Assistant | Soy Henry - EdTech

Nov 2021 - Oct 2022 | Remote

- Delivered live instruction and technical mentoring across a project-based full-stack curriculum covering JavaScript, React, Redux, Node.js, Express, REST APIs, PostgreSQL, Sequelize and Git.
- Guided students through building full-stack applications, reviewing code and helping them solve problems involving debugging, data modelling, CRUD operations, authentication and frontend-backend integration.
- Evaluated technical progress through assessments and team projects, providing actionable feedback on code quality, architecture and development practices.

TECHNICAL SKILLS

Languages & core: TypeScript, JavaScript, React, Next.js, HTML5, CSS3, Sass

UI, state & data: Material UI, MUI DataGrid Pro, Emotion, Tailwind CSS, Redux, Recoil, REST APIs, Axios

Real-time & visualisation: WebSockets, Highcharts, TradingView, MUI Charts, virtualised data interfaces

Testing & quality: Playwright, Jest, React Testing Library, Cypress, ESLint

Mobile, cloud & payments: Capacitor (iOS/Android), PWA, AWS Amplify, Stripe

Backend & tools: Node.js, Express, PostgreSQL, SQL, Sequelize, Git, GitLab

EDUCATION

Information Systems | Universidad Nacional de Lujan

Mar 2021 - Mar 2023 | Argentina

- Studied programming fundamentals, computational logic, discrete mathematics, information systems, and computer organisation and architecture.

Full Stack Web Development Bootcamp | Soy Henry

Oct 2021 - Feb 2022

- Completed an intensive, project-based programme focused on building full-stack web applications with JavaScript, React, Redux, Node.js, Express, REST APIs, PostgreSQL and Sequelize.
- Developed individual and team projects covering responsive interfaces, API integration, relational data modelling, CRUD operations, authentication, testing, Git and Agile/Scrum workflows.
